

Design and Technology at Clockhouse

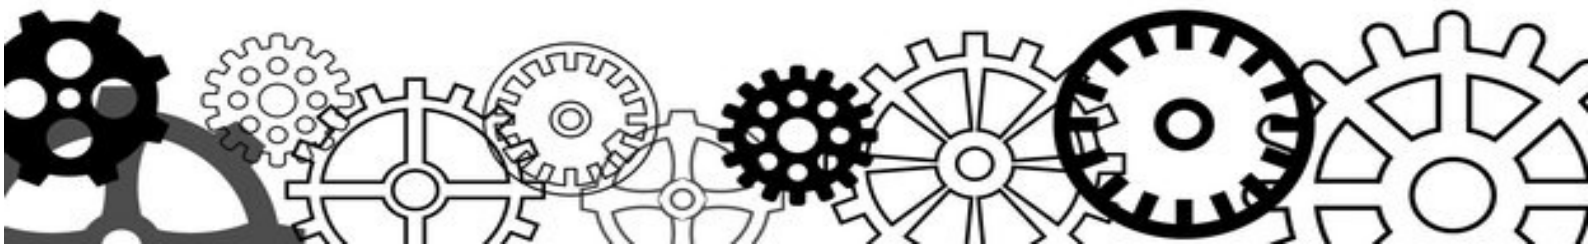

This term we have all been enjoying our Design and Technology curriculum. Year 1 have been learning about structures and have been exploring how to make a stable bridge. Year 2 have been completing their cooking unit and created healthy pizzas. Year 3 have been exploring pneumatic systems and Year 4 have been creating different desk tidies. Year 5 have developed their CAD skills and created digital thermometers. Year 6 designed and created their own birdhouses using a combination of different skills!

Cooking and Nutrition in the curriculum...

This term, some of the children have been developing their cooking and nutrition skills. Using our new cooking facilities and equipment, the children in Year 2 have created their own healthy pizzas. The children are now able to have 'whole class' cooking lessons where they can develop their cooking skills and understand the importance of creating a balanced meal.

What do the children think?

I like Design and Technology. It is important to make a stable structure so it doesn't collapse - Year 1

We made healthy pizzas, I enjoy making my own healthy choices using what I have learnt. - Year 2

My product needs a purpose, I use the design brief to help. - Year 3

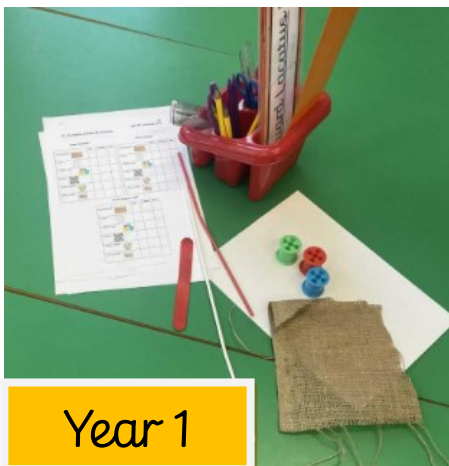

We are learning about shell structures and this will help us create our desk tidy. We have a design brief we must follow. -Year 4

Our Year 4 learning helped us to code a digital thermometer for a pet using our new Micro: bit mini computers. I think computer aided design is part of our future - Year 5

We love DT! We have been learning about bird houses and the importance of sustainability - Year 6
