

# Computing

@ Autumn Term  
Newsletter

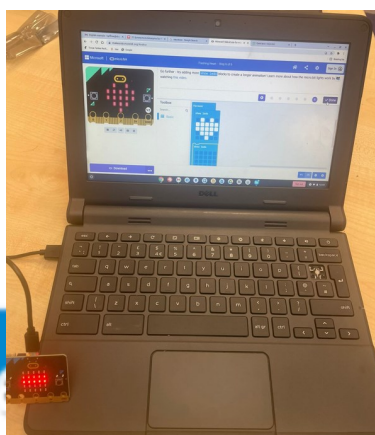

# Clockhouse

This term we have all been enjoying our new Computing curriculum. Year 1 have been learning how to programme Bee Bots and Years 2, 3, 4 and 6 have been using our new Coding software to develop their understanding of programming. Year 5 have been getting to know how the chrome books work, how to research effectively and how to present their learning using google slides.

## Computing across the Curriculum...

This term, some of the children have been applying their learning in Computing to DT. Here they are programming the Micro:bit using Makecode to show different images and texts that they had designed themselves. This included flashing images and making the text move across the screen.

# What do the children think?

During Computing we get to create things. I used shapes to make a face - Year 1

Computing is the best lesson because we learn new things, including keeping ourselves safe - Year 2

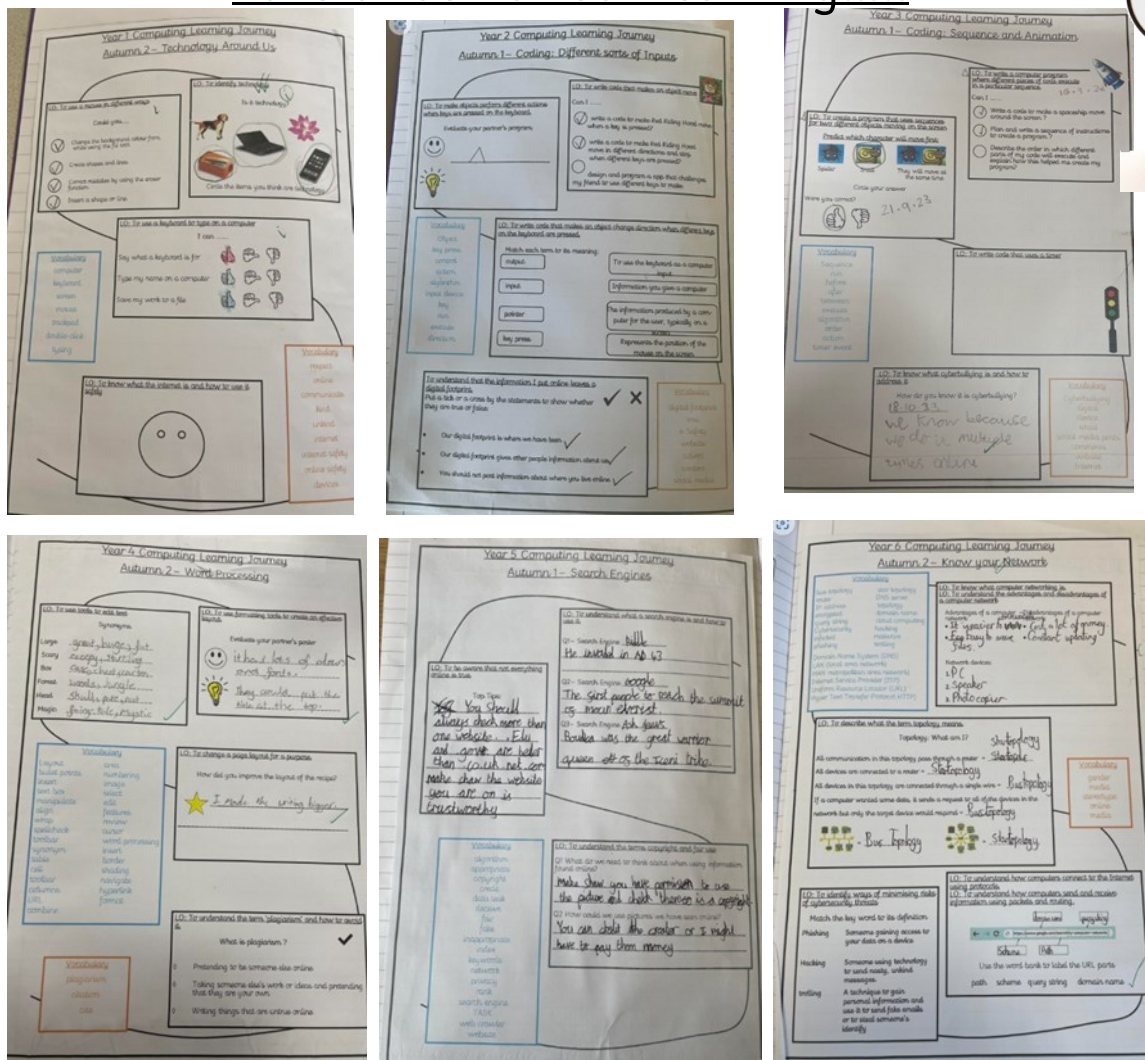

I learnt how to save my work and give clear instructions during our Coding lessons - Year 3

We learnt how to use hyperlinks and this helps us get to information quicker rather than searching for it again-Year 4

We learnt how to create presentations using google slides and insert videos, pictures and audio - Year 5

Computing is fascinating! We learnt all about different networks and connections. I loved our Coding unit and learning how to debug algorithms.
